NeuroGuard AI — Multi-Agent Architecture

Healthcare decision-support platform synthesizing Projects 1–6

Component notes

- Agent Gateway authenticates and routes every request.
- Orchestrator runs the Plan-Act-Observe loop and enforces a step limit.
- Risk Agent applies a transparent weighted model derived from Project 3.
- RAG Agent retrieves from the embedded public guideline knowledge base.
- MCP-style Gateway proxies tool calls and sanitizes responses.
- Guardrail Agent blocks invalid inputs and flags high-risk cases.
- Audit Log records every agent step for full traceability.
- RAGAS-style metrics evaluate faithfulness, precision, and relevance.
